

# ROBLOX PLAYERS' SENTIMENT ANALYSIS

Abeer Radhi  
Sarah Mohamed

# WHAT & WHY?

We built an automated Python script that scrapes Roblox reviews, analyzes player sentiment using one of NLP models, and outputs structured dataset with a distribution chart.

The project automates feedback processing to capture true player opinions, helping game developers quickly pinpoint gameplay issues, improve player experiences, and boost retention.

# WHAT THE AGENT DID WELL?

- Agent Speed & Efficiency
- No Errors

# WHERE WE HAD TO CORRECT THE AGENT?

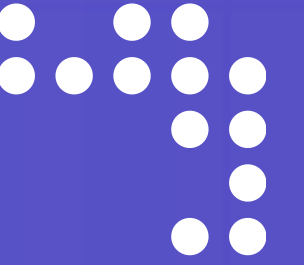

- Model Upgrade
- Label Mapping Fix

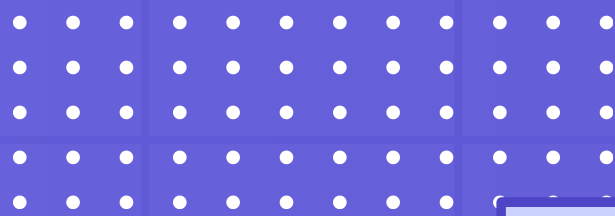

# WHAT BROKE?

- Steam Platform Issue
- PowerShell Syntax Error
- API Rate Limits

# WHAT WE LEARNED

- Start Small for Testing.
- Domain Slang Requires Advanced AI.
- AI agents generate code fast, but human supervision is required to fix label mappings, manage rate limits, and debug terminal errors.

**THANK  
YOU**
